The Commission's Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. **Description of Request:** The applicant proposes to replace the existing bottom hinged spillway gates and flashboards with Obermeyer gates, replace the trashracks at the intake, and construct a control room to house the equipment and instrumentation needed to operate the new Obermeyer gates at the Tallulah Falls Development of the project. The Obermeyer gates are necessary for the continued operation of the Tallulah Falls Dam, and would allow the applicant to regulate reservoir elevations more effectively. The applicant would perform all work to install the Obermeyer gates behind a bulkhead that would be anchored on the upstream side of the dam. The Obermeyer gate installation is expected to last 18 to 24 months. This proposed action does not require a drawdown of Tallulah Falls Lake. The ground disturbance associated with the new control building construction would be on an upland parcel less than 1-acre in size, and would not require a National Pollutant Discharge Elimination System permit. The project would continue to operate under the terms of its current license including continued minimum flow releases, and applicable Water Quality Certification.
